

Título	BIOMATERIAL FOR WOUND REGENERATIVE HEALING	
Solicitante	UNIV CALIFORNIA [US]	Fecha de publicación WO2024040248A2·2024-02-22
Resumen	The present embodiments include a biomaterial with immunomodulating properties engineered for complete incorporation into injured tissues while enhancing the regenerative healing activities of immune and stromal cells. The biomaterial may be used in, but not limited to, skin or muscle. A first component in some embodiments is gelatin or gelatin methacryloyl. In the present embodiments, this component consists of a specific composition and its modification with another therapeutic component. A second component of some embodiments, apoptotic neutrophil cells, has not previously been used in biomaterials for wound healing nor in combination with the first gelatin-based component.	
CIP	A61K47/34 Macromolecular compounds obtained otherwise than by reactions only involving carbon-to-carbon unsaturated bonds, e.g. polyesters, polyamino acids, polysiloxanes, polyphosphazines, copolymers of polyalkylene glycol or poloxamers (A61K47/10 takes precedence)

Título	COLLAGEN COMPOSITIONS AND USES FOR BIOMATERIAL IMPLANTS	
Solicitante	MAM HOLDINGS OF WEST FLORIDA L L C [US]	Fecha de publicación US2023270916A1·2023-08-31
Resumen	Compositions containing purified collagen biomaterial derived from tissues, for example, insoluble amnion, soluble amnion, soluble chorion of the human placenta, are provided. The collagen compositions can be used to promote wound healing, promote tissue regeneration, prevent or reduce scarring, reduce local inflammation, minimize tissue rejection, promote graft integration. Methods for using the collagen composition as a biomaterial implant for dermal filling, skin grafting, and hair transplantation are also provided.	
CIP	A61K35/12 Materials from mammals; Compositions comprising non-specified tissues or cells; Compositions comprising non-embryonic stem cells; Genetically modified cells (vaccines or medicinal preparations containing antigens or antibodies)
